

Fix completion; prove airport economics before buying reach

Run two measured operations pilots—one for onboarding completion and one for airport night supply—before scaling WA002 or airport acquisition.

17.5%

Approved by day 30

31.9%

Airport night fulfilment

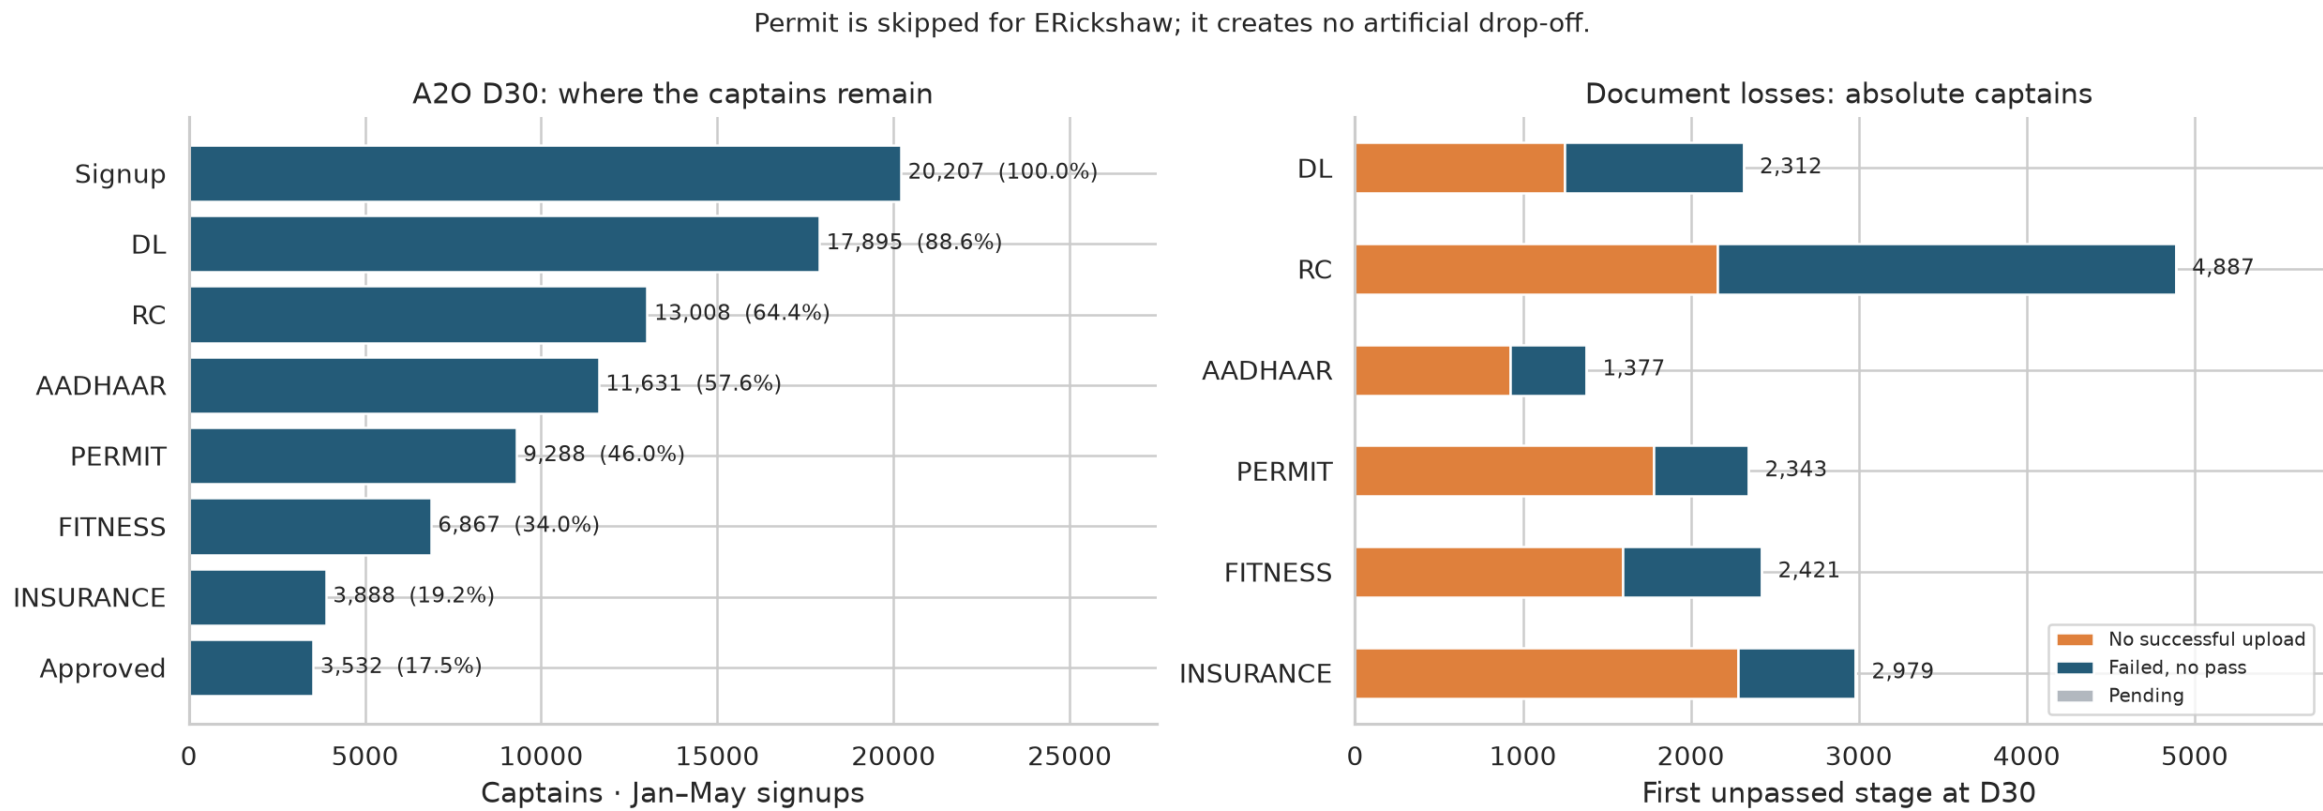

+4.2 pp

WA002 observed difference

- 1 Onboarding: RC is the largest count leak; Insurance and capture quality are recoverable scenarios.
- 2 Airport: 21:00–04:00 is a repeatable shortage, but suburban return fares are weak.
- 3 Decision: run measured pilots; hold blanket WA002 and airport acquisition scale-up.

Onboarding loses volume at RC; later handoffs are more recoverable

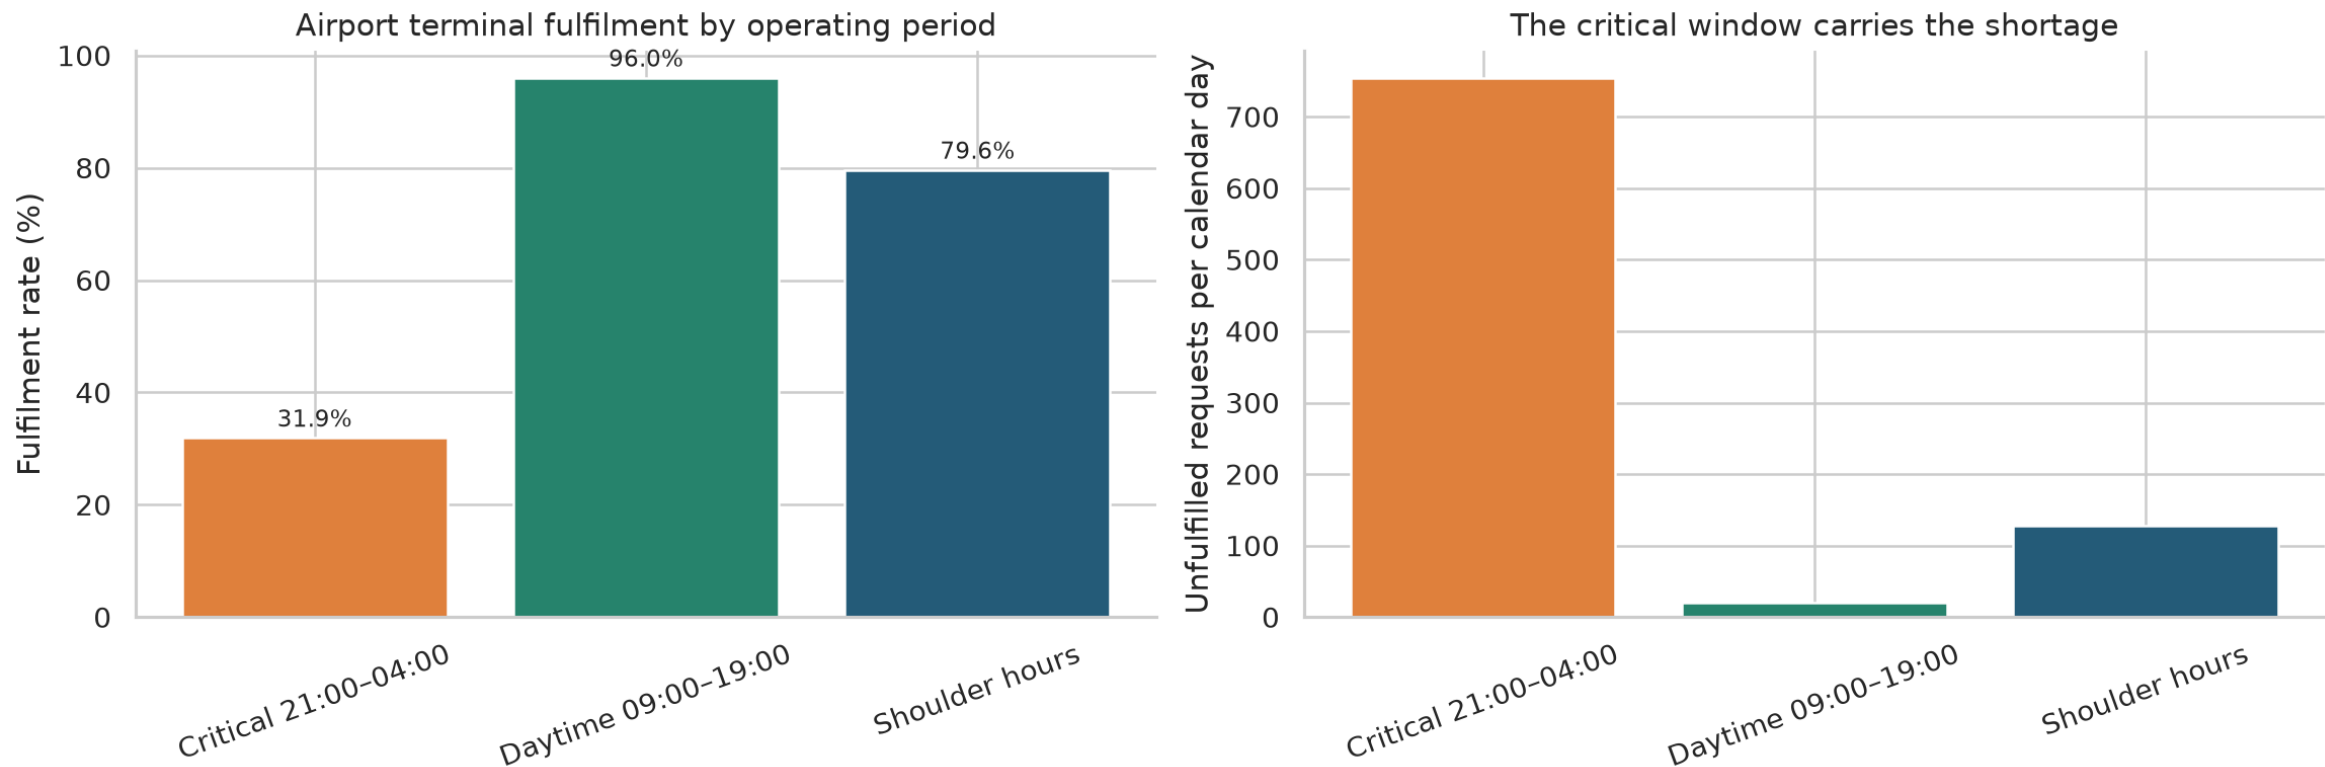

January-May signups; everyone included; 30-day window.

2,281 Insurance no-upload pool; base scenario ~175 approvals/month. ERickshaw skips Permit.

Airport shortage is concentrated overnight

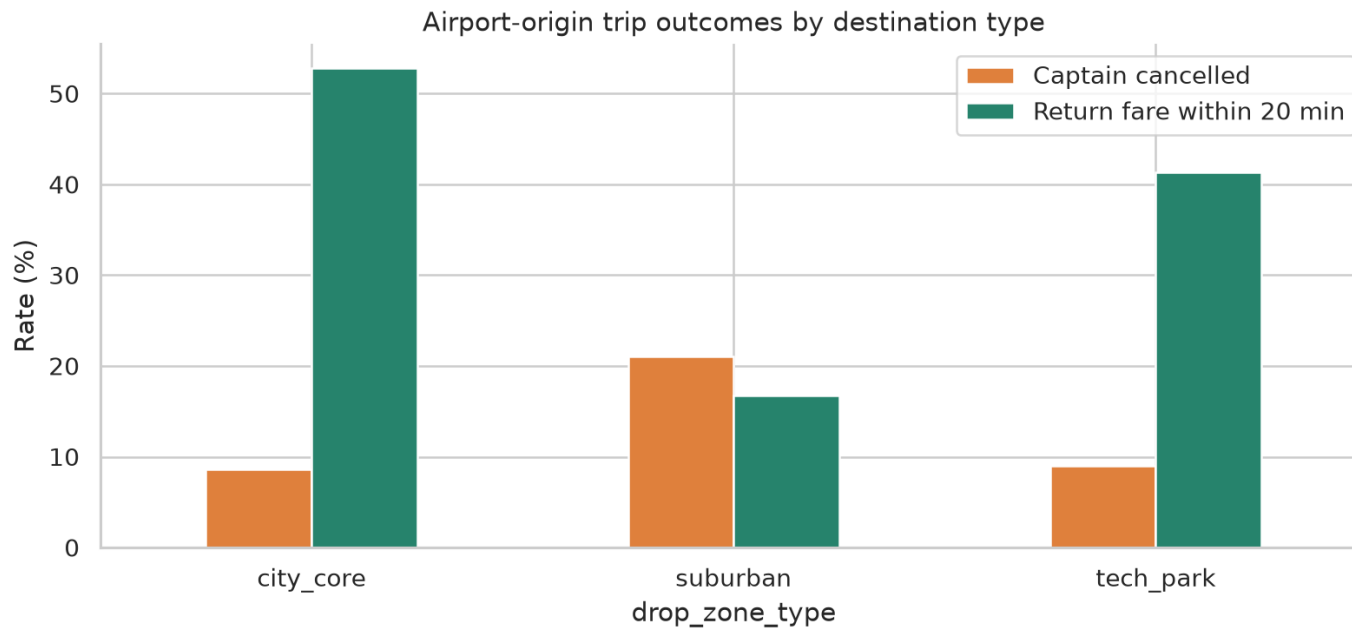

May discovery, June validation; based on hourly marketplace counts.

Critical: 754 unfulfilled/day and 83.6% of terminal unfulfilled demand; daytime fulfilment 96.0%.

Airport trips show weak return utilization

The trip sample is directional and has no unique captain ID or earnings.

Suburban trips

Cancellation: 21.0% vs 8.6% core.

Return fare within 20 min: 16.7% vs 52.8%.

Fix utilization before buying more headcount.

Both growth ideas need experiments

A measured difference or planning scenario is not a proven effect.

WA002

Observed difference +4.2 pp (+2.7 to +5.8).

~3,856 captains who clear Registration Certificate for a 4-point randomised test.

Current flow has only 1.83× headroom for unique recipients.

Airport

No blanket catchment bonus.

20-slot, 28-night timed pilot; target ~75 extra fulfilments/night.

Illustrative variable cost INR 4,560/night.

Acquire only after return economics improve.

Monday plan and rollout gates

Owners can start diagnosis now; expansion follows incremental outcomes and quality guardrails.

ONBOARDING

Instrument Insurance stalls and guided recapture; use randomised comparison groups.

AIRPORT OPS

Roster timed availability; test queue/return matching and bounded fallback over 28 nights.

GROWTH + ANALYTICS

Run the WA002 comparison after Registration Certificate clearance; assess acquisition only with unique IDs and actual costs.

Gate both pilots on incremental approvals or fulfilled trips, first orders or return-fare guardrails, complaints, fraud/quality and Finance-approved unit economics.
